INTRODUCTION

- **Code Escape Room is a text-based puzzle game developed using C programming.**
- **The player is trapped in a virtual room and must solve puzzles to escape.**
- **Each correct answer unlocks the next level.**
- **The game ends after all puzzles are completed successfully.**
- **The project demonstrates basic game logic using simple C concepts.**

OBJECTIVE OF THE PROJECT

- To demonstrate logical problem solving using C language.
- To apply programming concepts in a real application.
- To create an interactive console-based game.
- To make learning programming engaging and practical.

Features of the Project

- **Multiple puzzle levels**
- **User interaction through input/output**
- **Immediate response to answers**
- **Simple and structured design**
- **Easy to run on any C compiler**
- **Beginner-friendly implementation**

Concepts Used in C Programming

Program
flow control

Loops

Conditional Statements
(if-else)

Return values

functions

User Input and Output (scanf, printf)

Game Flow

1. **Game starts with introduction message.**
2. **Player enters Level 1 puzzle.**
3. **Correct answer unlocks next level.**
4. **Player completes Level 2 and Level 3.**
5. **After solving all puzzles, player escapes.**
6. **Game displays completion message.**

Level Description

Level 1 – Number Puzzle

- Identify the number pattern (2, 4, 6, 8, ?)

Level 2 – Password Puzzle

- Password based on sum of first five natural numbers.

Level 3 – Logic Question

- Simple reasoning question to finish the game.

Program Structure

- Main function controls overall execution.
- Separate functions created for each level:
 - level1()
 - level2()
 - level3()
- Each function returns:
 - 1 → Correct answer
 - 0 → Wrong answer
- Makes program modular and easy to understand.

Run

Clear

1#include <stdio.h>

2

3// Level 1

4int level1() {

5int ans;

6printf("\nLEVEL 1: Number Puzzle\n");

7printf("Find the next number:\n");

8printf("2 4 6 8 ?\n");

9printf("Enter answer: ");

10scanf("%d", &ans);

11

12if(ans == 10) {

13printf("Correct! Door 1 unlocked.\n");

14return 1;

15} else {

16printf("Wrong answer!\n");

17return 0;

18}

19}

20

21// Level 2

Output

==== CODE ESCAPE ROOM ====

Solve all puzzles to escape!

LEVEL 1: Number Puzzle

Find the next number:

2 4 6 8 ?

Enter answer: 10

Correct! Door 1 unlocked.

LEVEL 2: Password Lock

Hint: Sum of first five natural numbers

Enter password: 15

Correct! Door 2 unlocked.

LEVEL 3: Logic Question

How many days are there in a week?

Enter answer: 7

Correct! You escaped the room!

Congratulations! Game Completed.

Correct! You escaped the room!

Congratulations! Game Completed.

=== Code Execution Successful ===
```

Advantages & Future Scope

Advantages

- Simple and easy to understand
- Demonstrates core C concepts
- Interactive learning approach
- Easy to modify

Future Scope

- Add scoring system
- Limited attempts
- Timer-based puzzles
- More levels and challenges

Conclusion & Thank You

- The project demonstrates implementation of game logic using basic C programming.
-
- Functions and conditions help control program flow efficiently.
-
- Shows how programming concepts can be used creatively.

Thank You!
